PRODUCT PROFILE

FLUORONAR® SERIES 1070V

PRODUCT DATA SHEET

GENERAL DESCRIPTION

Advanced Thermoset Solution Fluoropolymer

COMMON USAGE

A low VOC, fluoropolymer coating that provides an ultra-durable finish with user friendly brush, roll and conventional spray application. It has outstanding color and gloss retention even in the most severe exposures. Under certain conditions, it may be used to restore aged fluoropolymer coil applied coatings or for OEM applications. Contact Tnemec Technical Services or your local Tnemec representative for details.

COLORS

Refer to Tnemec Color Guide. Note: Certain colors may require multiple coats depending on method of application and finish coat color. The preceding coat should be in the same color family, but noticeably different. Upon selection of the finish coat color, the intermediate coat color will be selected by Tnemec's color lab.

Allow for overspray and surface irregularities. Film thickness is rounded to the nearest 0.5 mil or 5 microns. Application of coating below minimum or above maximum recommended dry film thicknesses may adversely affect coating performance. †

MIXING

Stir contents of the container marked Part A, making sure no pigment remains on the bottom. Add the contents of the can marked Part B to Part A while under agitation. Continue agitation until the two components are thoroughly mixed. Do not use mixed material beyond pot life limits. Caution: Part B is moisture-sensitive and will react with atmospheric moisture. Keep unused material tightly closed at all times.

THINNING

For brush, roller, and air spray, thin up to 10% per gallon with No. 63 Thinner. Thinning is required for proper application. Note: In areas that require lower VOC, use No. 65 Thinner. Caution: Do not add thinner if more than thirty (30) minutes have elapsed after mixing.

POT LIFE

2 hours at 50°F (10°C), 70°F (21°C), 90°F (32°C)

</tbody>
</table>

Low temperatures or longer hoses require higher pot pressure.

Use appropriate tip/atomizing pressure for equipment, applicator technique and weather conditions.

Brush: Recommended for small areas only. Use high quality natural or synthetic bristle brushes.

Minimum 40°F (4°C) Maximum 120°F (49°C)
The surface should be dry and at least 5°F (3°C) above the dew point.

Cure time necessary to resist direct contact with moisture at surface temperature:

<tr>
<th>Temperature</th>
<th>Cure Time</th>

<td>50°F (10°C)</td>
<td>6 hours</td>

</tr>
<tr>
<td>90°F (32°C)</td>
<td>4 hours</td>
</tr>
</tbody>
</table>

If the coating is exposed to moisture before the preceding cure parameters are met, dull, flat or spotty-appearing areas may develop. Actual times will vary with air movement, film thickness and humidity.

CLEANUP

Flush and clean all equipment immediately after use with the recommended thinner or MEK.

† Values may vary with color.
