PRODUCT PROFILE

**GENERIC DESCRIPTION**
Aliphatic Acrylic Polyurethane

**COMMON USAGE**
A coating highly resistant to abrasion, wet conditions, corrosive fumes and exterior weathering. High build quality combines with project specific primers for two-coat, labor saving systems. Fast curing options are available; see Curing Time below. NOT FOR IMMERSION SERVICE.

**COLORS**
Refer to Tnemec Color Guide. **Note:** Certain colors may require multiple coats depending on method of application and finish coat color. When feasible, the preceding coat should be in the same color family, but noticeably different.

**FINISH**
Gloss

**SPECIAL QUALIFICATIONS**
Series 1074 meets the requirements of SSPC-36 (level 3) Paint Standard.

**PERFORMANCE CRITERIA**
Contact your Tnemec representative for specific test results.

**TECHNICAL DATA**

**VOLUME SOLIDS**
66 ± 2.0% (mixed) †

**RECOMMENDED DFT**
2.0 to 5.0 mils (50 to 125 microns) per coat. **Note:** Number of coats and thickness requirements will vary with substrate, application method and exposure. Contact your Tnemec representative.

Curing time varies with surface temperature, air movement, humidity and film thickness. If coating is exposed to moisture before the applicable cure parameters are met, dull, flat or spotty appearing areas may develop. **Note:** For faster curing and low-temperature applications, add No. 44-710 Urethane Accelerator; see separate product data sheet. Contact Tnemec Technical Services for force curing times and temperatures.

**THEORETICAL COVERAGE**

1,051 mil sq ft/gal (25.8 m²/L at 25 microns). See APPLICATION for coverage rates. †

**NUMBER OF COMPONENTS**
Two: Part A and Part B

**MIXING RATIO**

</table>

**Note:** Can be spray applied at 3.0 to 5.0 mils (75 to 125 microns) DFT per coat when extra protection or the elimination of a coat is desired. Allow for overspray and surface irregularities. Wet film thickness is rounded to the nearest 0.5 mil or 5 microns. Application of coating below minimum or above maximum recommended dry film thicknesses may adversely affect coating performance. †

#### Mixing

Stir contents of the container marked Part A, making sure no pigment remains on the bottom. Add the contents of the can marked Part B to Part A while under agitation. Continue agitation until the two components are thoroughly mixed. When used with 44-710 Urethane Accelerator, first blend 44-710 into Part A under agitation, continue as above. Do not use mixed material beyond pot life limits. Caution: Part B is moisture-sensitive and will react with atmospheric moisture. Unused material must be kept tightly closed at all times.

#### Thinking

For air or airless spray, thin 5% or 7/10 pint (340 mL) per gallon with No. 42 Thinner if temperatures are below 80°F (27°C) or use 8% of No. 48 Thinner for temperatures above 80°F (27°C). For brush and roller, thin 10% or 3/4 pint (380 mL) per gallon with No. 39 Thinner. Note: Thinning is required for proper application. Caution: Do not add thinner if more than 30 minutes have elapsed after mixing.

#### Pot Life

1 1/2 hours at 77°F (25°C) unthinned 2 hours at 77°F (25°C) thinned

#### Application Equipment

</tbody>
</table>

**Note:** Low temperatures or longer hoses require higher pot pressure.

**Airless Spray Application:** Contact Tnemec Technical Services.

**Roller:** Use 1/4" or 5/8" (6.4 mm or 9.5 mm) synthetic woven nap roller covers. Do not use long nap roller covers. Two coats are required to obtain dry film thickness above 3.0 mils (75 microns).

**Brush:** Recommended for small areas only. Use high quality natural or synthetic bristle brushes. Two coats are required to obtain recommended film thickness above 3.0 mils (75 microns).

**Surface Temperature:**

Minimum 55°F (2°C)   Maximum 120°F (49°C)

The surface should be dry and at least 5°F (3°C) above the dew point.

**Cleanup:**

Flush and clean all equipment immediately after use with the recommended thinner or MEK.

† Values may vary with color.
