Allow for overspray and surface irregularities. Film thickness is rounded to the nearest 0.5 mil or 5 microns. Application of coating below minimum or above maximum recommended dry film thicknesses may adversely affect coating performance.

**Mixing**

Note: Add Part C Accelerator according to the following chart.

<table>
<thead>
<tr>
<th>Surface Temp. Range</th>
<th>Amount of Part C to Add (Small Kit - Parts A and B mixed)</th>
</tr>
</thead>
<tbody>
<tr>
<td>40°F to 70°F (4°C to 21°C)</td>

</tr>
<tr>
<td>Above 80°F (27°C)</td>
<td>25% of amount supplied (2 oz or 60 mL)</td>
</tr>
</tbody>
</table>

Pour Part A into a clean container large enough to hold all three components. Add Part C Accelerator to Part A while under agitation. Mix thoroughly. Add Part B to the mixture of Parts A, C while under agitation. Continue agitation until all components are thoroughly mixed. Important: Mixing ratio is four (Part A) to one (Part B) by volume.

**Thinning**

Use No. 49 or No. 2 Thinner. For air spray, thin up to 10% per gallon. For roller, thin up to 5% per gallon. Caution: Do not add thinner if more than thirty (30) minutes have elapsed after mixing.

**Pot Life**

1 hour at 77°F (25°C) 30 minutes at 100°F (38°C)

Note: See chart at beginning of Mixing instructions.

Low temperature or longer hoses require higher pot pressure. Proper atomization is necessary to obtain a smooth finish.

**Airless Spray:** Not recommended.

**Roller:**

Use 1/4" (6.4 mm) synthetic woven nap cover. Do not use medium or long nap roller covers.

**Brush:** Recommended for small areas only. Use high quality natural or synthetic bristle brushes.

**Surface Temperature**

Minimum 40°F (4°C)  Maximum 120°F (49°C)

The surface should be dry and at least 5°F (3°C) above the dew point.

**Clean Up**

Flush and clean all equipment immediately after use with the recommended thinner or xylol.
