METALLIC CLEARCOAT
SERIES 1079

PRODUCT PROFILE

GENERAL DESCRIPTION
Aliphatic Acrylic Polyurethane

COMMON USAGE
A unique clear coat used to both enhance the finish and extend the long-term weathering qualities of metallic pigmented coatings. Resists most graffiti markings. Series 44-500 (patent 5,548,010 and other patents pending), an optional indicator dye, is available to aid in uniform application. Where VOC regulations apply, this product can only be sold or used as part of a faux finishing coating system.

COLORS
Clear. Note: 44-500 will temporarily change the appearance to a violet tint during application. After a period of up to 72 hours of sunlight exposure, appearance will be clear.

FINISH
High gloss

PERFORMANCE CRITERIA
Extensive test data available. Contact your Tnemec representative for specific test results.

COATING SYSTEM

BASE COATS
Series 1077. Note: Series 1079 Metallic Clearcoat should be applied within 24 hours of a previous Series 1079 application and within 21 days of a 1077 application.

SURFACE PREPARATION

Allow for overspray and surface irregularities. Film thickness is rounded to the nearest 0.5 mil or 5 microns. Application of coating below minimum or above maximum recommended dry film thicknesses may adversely affect coating performance.

MIXING

Note: Add Part C Accelerator according to the following chart.

<thead>
<tr>

<tr>
<td>Above 80°F (27°C)</td>
<td>25% of amount supplied (2 oz or 60 mL)</td>
</tr>
</tbody>
</table>

Pour Part A into a clean container large enough to hold all three components. Add Part C Accelerator and the vial of 44-500 to Part A while under agitation. Mix thoroughly. Add Part B to the mixture of Parts A, C and 44-500 while under agitation. Continue agitation until all components are thoroughly mixed. Important: Mixing ratio is three (Part A) to one (Part B) by volume.

THINNING

For air spray or roller, thin up to 10% with No. 2 or No. 49 Thinner. Caution: Do not add thinner if more than thirty (30) minutes have elapsed after mixing.

POT LIFE

1 hour at 77°F (25°C) - 30 minutes at 100°F (38°C)

Low temperature or longer hoses require higher pot pressure. Proper atomization is necessary to obtain a smooth finish.

Airless Spray: Not recommended.

Roller:

Use 1/4" (6.4 mm) synthetic woven nap cover. Do not use medium or long nap roller covers.

Brush:

Recommended for small areas only. Use high quality natural or synthetic bristle brushes.

SURFACE TEMPERATURE

Minimum 40°F (4°C) Maximum 120°F (49°C)
The surface should be dry and at least 5°F (3°C) above the dew point.

CLEANUP

Flush and clean all equipment immediately after use with the recommended thinner or xylol.
