PRODUCT PROFILE

GENERIC DESCRIPTION
Modified Polyamidoamine Epoxy

COMMON USAGE
High-build coating with superior wetting for marginally prepared rusty steel and tightly adhering old coatings. Excellent abrasion-, chemical- and corrosion-resistance. Perfect foundation for aliphatic-polyurethanes. NOT FOR IMMERSION SERVICE.

COLORS
DC74 Off-White, 1243 Metallic Aluminum and more: refer to Tnemec Color Guide.

Note: Epoxy's chalk with extended exposure to sunlight. Lack of ventilation, incomplete mixing, miscatalyzation or the use of heaters that emit carbon dioxide and carbon monoxide during application and initial stages of curing may cause yellowing to occur.

FINISH
Semi-gloss

PERFORMANCE CRITERIA
Extensive test data available. Contact your Tnemec representative for specific test results.

TOPCOATS
Series 6, 30, 35, 66, 669, L69F, N69, N69F, V69, V69F, 73, 84, 101, 105, 108, 109, 1070, 1071, 1072, 1074, 1074U, 1075, 1075U. Note: When topcoating with Endura-Shield polyurethane finish, exterior exposed Series 135 has the following maximum time to recoat: Series 75, 1074/1074U or 1075/1075U, 60 days. Series 1070, 1071 or 1072, 14 days. If these times are exceeded, an epoxy intermediate coat or scarification is required before topcoating. Refer to appropriate topcoat data sheet for additional information.

SURFACE PREPARATION

STEEL
Abrasive blast cleaning to SSPC-SP6/NACE 5 generally produces the best coating performance. If conditions will not permit this, Series 135 may be applied to SSPC-SP2 or SP3 Hand or Power Tool Cleaned surfaces.

Surface preparation recommendations will vary depending on substrate and exposure conditions. Contact your Tnemec representative or Tnemec Technical Services.

Test patch is recommended.

Must be clean, dry and free of oil, grease and other contaminants.

**Note:** Can be spray applied at 7.0 to 9.0 mils (180 to 230 microns) DFT per coat when extra protection or the elimination of a coat is desired. Can be sprayed at 4.0 to 6.0 mils (100 to 150 microns) DFT per coat for use in systems requiring a conventional build. Brush or roller will normally achieve the 4.0 mil (100 microns) minimum for conventional build application. However, under certain conditions some colors may require two coats to achieve suggested film thickness. Allow for overspray and surface irregularities. Film thickness is rounded to the nearest 0.5 mil or 5 microns. Application of coating below minimum or above maximum recommended dry film thicknesses may adversely affect coating performance. 

**MIXING**

Power mix contents of each container, making sure no pigment remains on the bottom. Add the contents of the can marked Part B to Part A while under agitation. Continue agitation until the two components are thoroughly mixed. Do not use mixed material beyond pot life limits. **Note:** Both components must be above 50°F (10°C) prior to mixing. For application to surfaces between 50°F to 60°F (10°C to 16°C), allow mixed material to stand thirty (30) minutes and restir before using. For optimum application properties, blended components should be above 60°F (16°C).

**THINNING**

For air or airless spray, thin 10% to 15% or 3/4 pint to 1 1/4 pints (380 to 570 mL) per gallon with No. 19 or No. 62 Thinner. For brush or roller, thin 10% to 15% or 3/4 pint to 1 1/4 pints (380 to 570 mL) per gallon with No. 18 or No. 62 Thinner.

**POT LIFE**

8 hours at 50°F (10°C)     4 hours at 77°F (25°C)     2 hours at 100°F (38°C)

</table>

Use appropriate tip/atomizing pressure for equipment, applicator technique and weather conditions. **Note:** Series 135-1245 must be applied by brush or roller to achieve aluminum appearance. For spray application, contact your Tnemec representative. **Roller:** Use 3/8" or 1/2" (9.5 mm or 12.7 mm) synthetic woven nap covers. **Brush:** Use high quality natural or synthetic bristle brushes.

**Surface Temperature**

Minimum 50°F (10°C)     Maximum 135°F (57°C)

The surface should be dry and at least 5°F (9°C) above the dew point. **Note:** Amine blush may develop during cure if the surface temperature drops below the minimum, particularly under high humidity. Blush must be removed prior to topcoating, contact your Tnemec representative.

**Cleanup**

Flush and clean all equipment immediately after use with the recommended thinner or MEK.
