**PRODUCT PROFILE**

**GENERAL DESCRIPTION**
Glass Flake Reinforced Modified Polyamine Epoxy

**COMMON USAGE**
Abrasion resistant, high solids, epoxy coating which offers high-build edge protection and excellent corrosion resistance. Contains glass flake and aluminum oxide for improved film integrity. For use on the interior and exterior of steel or concrete tanks, pipes, and other heavy-duty equipment in industrial service.

**COLORS**
Available in the following standard industrial colors: A11417 Light Gray, 1252 Beige, 35GR Black. **Note:** Epoxyes chalk with extended exposure to sunlight. Lack of ventilation, incomplete mixing, miscatalyzation or the use of heaters that emit carbon dioxide and carbon monoxide during application and initial stages of curing may cause yellowing to occur.

**IMPORTANT:** Due to the product's curing agent chemistry, color variations can be pronounced. However, these changes in color are aesthetic only and will not affect performance or certifications. Contact your Tnemec representative for more information.

**PERFORMANCE CRITERIA**
Extensive test data available. Contact your Tnemec representative for specific test results.

**COATING SYSTEM**

**SURFACER/FILLER/PATCHER**
Series 215, 217, 218

**PRIMERS**
**Steel:** Self-priming, L69, L69F, N69, N69F, 90E-92, 90G-1K97, 90-97, 90G-98, 94-H2O

**Concrete:** Self-priming, L69, L69F, N69, N69F

**TOPCOATS**
**Exterior:** Series 73, 290, 1028, 1029, 1074, 1074U, 1075, 1075U. **Note:** The following maximum recoat time applies when using Series 73, 290, 1074, 1074U, 1075, 1075U: fourteen (14) days. If this time limit is exceeded, Series 142 must be uniformly scarified prior to topcoating.

**PACKAGING**

**PART A**
1-1 gallon can

**PART B**
1-1 gallon can

**When Mixed**
10 gallons

**NET WEIGHT PER GALLON**
13.18 ± 0.25 lbs (5.98 ± .11 kg) †

**VOLUME SOLIDS**
82% ± 2.0% (mixed) †

**RECOMMENDED DFT**
8.0 to 20.0 mils (205 to 500 microns) in one coat. **Note:** Thickness requirements will vary with substrate, application method and exposure. Contact your Tnemec representative.

**CURING TIME**

<table>
<thead>
<tr>
<th>Surface Temperature</th>
<th>To Handle</th>
<th>To Topcoat</th>
<th>Immersion</th>
</tr>
</thead>
<tbody>
<tr>
<td>75°F (24°C)</td>
<td>6 hours</td>
<td>9 hours ‡</td>
<td>7 days</td>
</tr>
<tr>
<td>55°F (12°C)</td>
<td>64 hours</td>
<td>72 hours ‡</td>
<td>50 days</td>
</tr>
</tbody>
</table>

Curing time varies with surface temperature, air movement, humidity and film thickness. ‡ **Note:** Specific application requirements, including cure schedule and environmental conditions, must be followed when topcoating Series 142. Contact Tnemec Technical Service for detailed instructions. **Note:** For overlaps, tie-ins, and touch-ups, maximum recoat time with itself is seven days.

**VOLATILE ORGANIC COMPOUNDS**
EPA Method 24

| Unthinned            | 1.27 lbs/gal solids |
| Thinned 5% (No. 4 Thinner) | 1.31 lbs/gal solids |
| Thinned 10% (No. 4 Thinner) | 1.36 lbs/gal solids |

**HAPS**
EPA Method 24

| Unthinned | 1.27 lbs/gal solids |
| Thinned 5% (No. 4 Thinner) | 1.31 lbs/gal solids |
| Thinned 10% (No. 4 Thinner) | 1.36 lbs/gal solids |

**THEORETICAL COVERAGE**
1,315 mil sq ft/gal (32.2 m²/L at 25 microns). See APPLICATION for coverage rates. †

**NUMBER OF COMPONENTS**
Two. Part A (amine) and Part B (epoxy)

**MIXING RATIO**
By volume: One (Part A) to one (Part B)

**PACKAGING**

| Large Kit     | 1-5 gallon pail | 1-5 gallon pail | 10 gallons  |
| Small Kit     | 1-1 gallon can  | 1-1 gallon can  | 2 gallons   |

**NET WEIGHT PER GALLON**
13.18 ± 0.25 lbs (5.98 ± .11 kg) †

**SURFACE PREPARATION**

**PRIMED STEEL**
Immersion Service: Scarify the Series L69, L69F, N69, N69F, V69 or V69F primer coat surface by brush-brushing with fine abrasive before topcoating if more than 30 days has elapsed since application and 142 is the specified topcoat.

**STEEL**
Non-Immersion Service: Self-priming, L69, L69F, N69, N69F

**CONCRETE**
Allow new cast-in-place concrete to cure a minimum of 28 days at 75°F (24°C). Verify concrete dryness in accordance with ASTM F 1869 “Standard Test Method for Measuring Moisture Vapor Emission Rate of Concrete Subfloor Using Anhydrous Calcium Chloride” (moisture vapor transmission should not exceed three pounds per 1,000 square feet in a 24 hour period), F 2170 “Standard Test Method for Determining Relative Humidity in Concrete using in situ Probes” (relative humidity should not exceed 80%), or D 4263 “Standard Test Method for Indicating Moisture in Concrete by the Plastic Sheet Method” (no moisture present). Prepare concrete surfaces in accordance with NACE No. 6/SSPC-SP13 Joint Surface Preparation Standards and ICRI Technical Guidelines. Abrasive blast, shot-blast, water jet or mechanically abrade concrete surfaces to remove laitance, curing compounds, hardeners, sealers and other contaminants and to provide a minimum ICRI-CSP 3 surface profile. Large cracks, voids and other surface imperfections should be filled with a recommended filler or surfacer.

**ALL SURFACES**
Must be clean, dry and free of oil, grease, chalk and other contaminants.

**CONTACT INFORMATION**
Published technical data and instructions are subject to change without notice. The online catalog at www.tnemec.com should be referenced for the most current technical data and instructions or you may contact your Tnemec representative for current technical data and instructions.

</tbody>
</table>

Allow for overspray and surface irregularities. Wet film thickness is rounded to the nearest 0.5 mil or 5 microns.

Application of coating below minimum or above maximum recommended dry film thicknesses may adversely affect coating performance. †

MIXING

Mix the entire contents of Part A and Part B separately. Scrape all of the Part A into the Part B pail by using a flexible spatula. While under agitation use a variable speed drill with a PS Jiffy blade and mix the blended components for a minimum of three minutes. During mixing, scrape the container walls to aid in complete blending of the two components. Apply the mixed material within pot life limits after agitation. Both components must be above 50°F (10°C) prior to mixing. For optimum application properties, the material temperature should be above 60°F (16°C). For applications to surfaces between 35°F to 50°F (2°C to 10°C) allow mixed material to stand 30 minutes and restir before use. Note: A large volume of material will set up quickly if not applied or lessened in mass. Caution: Do not reseal mixed material. An explosion hazard may be created.

THINNING

Caution: Do not add thinner to Part A prior to mixing with Part B. For airless spray, brush or roller, thin up to 5% per gallon with No. 1 Thinner or No. 60 Thinner. For air spray, thin up to 10% per gallon with No. 4 or No. 60 Thinner.

POT LIFE

2 hours at 77°F (21°C) 1 hour at 90°F (32°C)

SPRAY LIFE

1 hour at 77°F (21°C) 30 minutes at 90°F (32°C)

APPLICATION EQUIPMENT

Air Spray

<table>
<thead>
<tr>

<th>Tip Orifice</th>
<th>Atomizing Pressure</th>
<th>Mat'l Hose ID</th>
<th>Manifold Filter</th>
</tr>
</thead>
<tbody>
<tr>
<td>0.017&quot;-0.021&quot; (430-535 microns)</td>
<td>3400-4500 psi</td>
<td>5/8&quot; (9.5 mm)</td>
<td>30 mesh (600 microns)</td>
</tr>
</tbody>
</table>

Use appropriate tip/atomizing pressure for equipment, applicator technique and weather conditions.

Roller: Roller application optional when environmental restrictions do not allow spraying. Use 3/8" or 1/2" (9.5 mm to 12.7 mm) synthetic woven nap covers.

Brush: Recommended for small areas only. Use high quality natural or synthetic bristle brushes.

SURFACE TEMPERATURE

Minimum 55°F (2°C) Maximum 135°F (57°C)

The surface should be dry and at least 5°F (3°C) above the dew point.

CLEANUP

Flush and clean all equipment immediately after use with the recommended thinner or MEK.

† Values may vary with color.
