PRODUCT PROFILE

GENERIC DESCRIPTION
Novacryl Vinyl Ester

COMMON USAGE
A chemical resistant primer for use with Series 252SC secondary containment system. Note: Contact your Tnemec representative or Tnemec Technical Services with specific chemical exposures.

COLORS
5002 Beige (primer only)

COATING SYSTEM
Series 215, 218. Note: A repair kit of 201, with Part C fumed silica, is available for small patching/surfacing repairs (Reference Technical Bulletin 99-22). For more extensive repairs and additional information, contact your Tnemec representative or Tnemec Technical Services.

TOPCOATS
Series 252SC

SURFACE PREPARATION

STEEL
SPC-SP5/NACE 1 White Metal Blast with a minimum anchor pattern of 3.0 mils. Refer to Tnemec’s Application Specification for Series 251SC to Steel Substrates for specific requirements.

CONCRETE
Allow new poured-in-place concrete to cure a minimum of 28 days at 75°F (24°C). Verify concrete dryness in accordance with ASTM F 1869 “Standard Test Method for Measuring Moisture Vapor Emission Rate of Concrete Subfloor Using Anhydrous Calcium Chloride” (moisture vapor transmission should not exceed three pounds per 1,000 square feet in a 24 hour period), F 2170 “Standard Test Method for Determining Relative Humidity in Concrete using in situ Probes” (relative humidity should not exceed 80%), or D 4263 “Standard Test Method for Indicating Moisture in Concrete by the Plastic Sheet Method” (no moisture present). Note: The testing listed above cannot guarantee avoidance of future moisture-related problems particularly with existing concrete slabs. This is especially true if the use of an under slab moisture vapor barrier cannot be confirmed or concrete contamination from oils, chemical spills, unreacted silicates, chlorides or Alkali Silica Reaction (ASR) is suspected.

Prepare concrete surfaces in accordance with NACE No. 6/SSPC-SP13 Joint Surface Preparation Standards and ICRI Technical Guidelines. Abrasive blast, shot-blast, water jet or mechanically abrade concrete surfaces to remove laitance, curing compounds, hardeners, sealers and other contaminants and to provide a minimum ICRI-CSP 3 or greater surface profile. Large cracks, voids and other surface imperfections should be filled with a recommended filler or surfacer.

ALL SURFACES
Must be clean, dry and free of oil, grease and other contaminants.

TECHNICAL DATA

VOLUME SOLIDS
Theoretical 89% (mixed). Series 251SC system contains a reactive monomer and some loss will occur during application and cure. Actual solids by volume will vary depending upon temperature and air movement. See Coverage Rates.

4.0 to 12.0 mils (100 to 305 microns)

RECOMMENDED DFT
4.0 to 12.0 mils (100 to 305 microns)

CURING TIME
If more than 72 hours have elapsed between coats, the ChemBloc coated surface must be mechanically abraded before topcoating. Note: Curing time varies with surface temperature, air movement, humidity and film thickness.

Temperature
75°F (24°C)
To Topcoat
6 to 72 hours

If more than 72 hours have elapsed between coats, the ChemBloc coated surface must be mechanically abraded before topcoating. Note: Curing time varies with surface temperature, air movement, humidity and film thickness.

VOLATILE ORGANIC COMPOUNDS
Unthinned: 0.59 lbs/gallon (71 grams/litre)

THEORETICAL COVERAGE
1,123 mil sq ft/gal (27.6 m²/L at 25 microns). See APPLICATION for coverage rates.

NUMBER OF COMPONENTS
Two: Part A (base) and Part B (catalyst)

10.80 ± 0.25 lbs (4.90 ± .11 kg) (mixed)

NET WEIGHT PER GALLON
10.80 ± 0.25 lbs (4.90 ± .11 kg) (mixed)

STORAGE TEMPERATURE
Minimum 55°F (2°C) Maximum 90°F (32°C)

Note: Material should be stored at temperatures between 70°F and 80°F (21°C and 27°C) for at least 48 hours prior to use.

(Dry) Continuous 300°F (149°C) Intermittent 325°F (163°C)

TEMPERATURE RESISTANCE
Part A: 3 months at 35°F to 49°F (2°C to 9°C), 2 months at 50°F to 70°F (10°C to 26°C), 1 month at 80°F to 90°F (27°C to 32°C). Do not store at temperature below 35°F (2°C) or above 90°F (32°C)

Part B: 12 months at recommended storage temperature.

EXPEDITIOUS USE OF THIS PRODUCT IS SUGGESTED, SINCE JOBSITE STORAGE CONDITIONS ARE BEYOND TNEMEC’S CONTROL, THIS PRODUCT IS NON-RETURNABLE.

FLASH POINT - SETA
Part A: 90°F (32°C) Part B: 100°F (88°C)

Keep out of the reach of children.

Practical spreading rates are based on typical field applications. Actual spreading rates will vary with surface profile, amount of overspray and surface irregularities. Application of coating below minimum or above maximum recommended dry film thicknesses may adversely affect coating performance.

**MIXING**

Power mix contents of Part A (base) thoroughly, making sure no pigment remains on the bottom of the can. Add the Part B (catalyst) slowly to the Part A while under agitation. Continue to agitate until thoroughly mixed. Care should be exercised so as not to entrain air in the mixed material. Do not use mixed material beyond pot life limits.

**THINNING**

For airless spray, thin up to 3% per gallon with No. 19 Thinner if needed for good atomization.

**POT LIFE**

3 to 5 hours at 65°F (18°C)  
1 1/2 to 2 1/2 hours at 75°F (24°C)

At higher temperatures, pot life will decrease (use caution in spray equipment). In hot weather, material should be cooled to 65°F to 80°F (18°C to 27°C) prior to mixing and application to improve workability and avoid shortened pot life.

**APPLICATION EQUIPMENT**

Brush, roller and airless spray.

**Brush:** Use high quality natural or synthetic bristle brush.

**Roller:** Use high quality 3/8” to 1/2” nap, shed resistant, woven fabric roller cover.

**Airless Spray**

</table>

Use appropriate tip/atomizing pressure for equipment, applicator technique and weather conditions.

**SURFACE TEMPERATURE**

Minimum 55°F (13°C)  
Maximum 110°F (43°C)

The surface should be dry and at least 5°F (5°C) above the dew point. At surface temperatures below 55°F (13°C), Series 251SC will not cure properly or obtain maximum chemical resistance. Following application, the surface temperature must be held at or above 55°F (13°C) until the coating surface is tack free—approximately 8 hours at 55°F (13°C) surface temperature, 6 hours at 70°F (21°C) surface temperature, 4 hours at 80°F (27°C) surface temperature—to avoid incomplete polymerization. At relative humidities above 75%, the cure of this coating may be retarded. It is also recommended that all precautions be taken to insure that adequate forced-air ventilation is available. To avoid outgassing, concrete temperature should be stabilized or in a descending temperature mode. Material should not be applied in direct sunlight.

**MATERIAL TEMPERATURE**

For optimum application, handling and performance, the material temperature during application should be between 70°F and 80°F (21°C and 27°C). Temperature will affect the workability. Cool temperatures increase viscosity and decrease workability. Warm temperatures will decrease viscosity and shorten pot life. THIS PRODUCT SHOULD NOT BE APPLIED BELOW 60°F (16°C) MATERIAL TEMPERATURE.

**CLEANUP**

Flush and clean all equipment immediately after use with the recommended thinner or MEK. If material begins to exotherm, flush equipment immediately.

**WARRANTY & LIMITATION OF SELLER’S LIABILITY:** Tnemec Company, Inc. warrants only that its coatings represented herein meet the formulation standards of Tnemec Company, Inc. THE WARRANTY DESCRIBED IN THE ABOVE PARAGRAPH SHALL BE IN LIEU OF ANY OTHER WARRANTY, EXPRESSED OR IMPLIED, INCLUDING BUT NOT LIMITED TO, ANY IMPLIED WARRANTY OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE. THERE ARE NO WARRANTIES THAT EXTEND BEYOND THE DESCRIPTION ON THE FACE HEREOF. The buyer’s sole and exclusive remedy against Tnemec Company, Inc. shall be for replacement of the product in the event a defective condition of the product should be found to exist and the exclusive remedy shall not have failed its essential purpose as long as Tnemec is willing to provide comparable replacement product to the buyer. NO OTHER REMEDY (INCLUDING, BUT NOT LIMITED TO, INCIDENTAL OR CONSEQUENTIAL DAMAGES FOR COST SAVINGS, INJURY TO PERSON OR PROPERTY, ENVIRONMENTAL INJURIES OR ANY OTHER INCIDENTAL OR CONSEQUENTIAL LOSS) SHALL BE AVAILABLE TO THE BUYER. Technical and application information herein is provided for the purpose of establishing a general profile of the coating and proper coating application procedures. Test performance results were obtained in a controlled environment and Tnemec Company makes no claim that these tests or any other tests, accurately represent all environments. As application, environmental and design factors can vary significantly, due care should be exercised in the selection and use of the coating.
