Allow for overspray and surface irregularities. Film thickness is rounded to the nearest 0.5 mil or 5 microns. Application of coating below minimum or above maximum recommended dry film thicknesses may adversely affect coating performance.

**MIXING**

Stir contents of the container marked Part A, making sure no pigment remains on the bottom. Add the contents of the can marked Part B to Part A while under agitation. Continue agitation until the two components are thoroughly mixed. Do not use mixed material beyond pot life limits. **Note:** Both components should be above 50°F (10°C) prior to mixing. For application to surfaces between 50°F to 60°F (10°C to 16°C), allow mixed material to stand thirty (30) minutes and restir before using. For optimum application properties, the material temperature should be above 60°F (16°C).

**THINNING POT LIFE**

Use No. 2 Thinner. For airless spray, thin up to 5% or 1/4 pint (190 mL) per gallon.

**APPLICATION EQUIPMENT**

- **Airless Spray**
  - Tip Orifice: 0.017”-0.021” (430-530 microns)
  - Atomizing Pressure: 2500-3000 psi (172-206 bar)
  - Mat’l Hose ID: 3/8” or 1/2” (9.5 or 12.7 mm)
  - Manifold Filter: NA

Use appropriate tip/atomizing pressure for equipment, applicator technique and weather conditions.

**SURFACE TEMPERATURE**

Minimum 50°F (10°C)    Maximum 120°F (49°C)

The surface should be dry and at least 5°F (3°C) above the dew point. Coating won’t cure below minimum surface temperature.

**CLEANUP**

Flush and clean all equipment immediately after use with the recommended thinner or xylol.
