PRODUCT PROFILE

GENERIC DESCRIPTION
Silane

COMMON USAGE
Dur A Pell 40 is a clear, filmless, penetrating water repellent for virtually all above-grade, concrete, stucco, natural stone, block and brick masonry. Concrete, stone and masonry treated with Dur A Pell 40 resist water intrusion, stain damage, freeze/thaw spalling, efflorescence and rust damage. The treatment does not alter the color or texture of the surface; nor significantly affect the vapor transmission qualities of the substrate. The solution penetrates the substrate and chemically reacts to create a powerful barrier against water penetration. This barrier is resistant to ultraviolet and weather deterioration.

COLORS
Dur A Pell 40 is a clear liquid when applied but dries clear, leaving the aesthetic appearance of the substrate unchanged.

PERFORMANCE CRITERIA
Contact your Tnemec representative for specific test results.

LIMITATIONS
Dur A Pell 40 is not formulated for use on below-grade surfaces. It is not intended to seal visible cracks or as a substitute for repointing defective mortar joints. A water repellent may not be able to completely resist wind-driven rain on all substrates; two or more applications, applied wet-on-wet, may be required for adequate performance. The substrate should not be acid washed after application. Dur A Pell 40 may have limited efficacy on calcareous masonry such as limestones, marbles and travertines. Dur A Pell 40 must penetrate into and react with the substrate for effective repellency, therefore, it is not suitable for many painted surfaces.

SURFACE PREPARATION

ALL SURFACES
The surface to be treated must be sound, dry and free of cracks, dirt, oils, efflorescence, paint, curing compounds and all other contaminants which may affect the penetration of Dur A Pell 40. Fill all cracks, voids and repoint mortar joints if necessary. New concrete and mortar must be allowed to cure a minimum of twenty-eight (28) days before treatment.

Protect asphaltic surfaces and wood, plants, shrubs and other landscaping from overspray. Incidental contact with clean glass or metal should not harm these surfaces. Overspray of Dur A Pell 40 should evaporate from these surfaces or be readily removed during normal window washing procedures. Dirt, dust and other contaminants may cause Dur A Pell 40 to react with these surfaces, resulting in a discoloration or clouding of the material. A test application is recommended to determine that no damage will occur to these non-masonry materials.

COATING SYSTEM

TOPCOATS
If color is desired, apply Series 607 Conformal Stain.

TECHNICAL DATA

CURING TIME
Dur A Pell 40’s volatility increases with temperature, therefore more material will evaporate from the treated surface prior to curing when temperatures exceed 80°F (27°C). Protect treated surfaces from rain and lawn sprinklers for 6 to 8 hours. (Time to resist moisture is increased at lower temperatures). Allow 7 days before evaluating performance.

VOLATILE ORGANIC COMPOUNDS
5.0 lbs/gallon (596 grams/litre)

ACTIVE INGREDIENT
Alkylalkoxy Silane

ACTIVE CONTENT
>40%

PACKAGING
1 gallon (3.79 L) cans, 5 gallon (18.96 L) pails, 55 gallon (208.2 L) drums

NET WEIGHT PER GALLON
7.03 ± 0.10 lb/gal (842 g/L)

STORAGE TEMPERATURE
Minimum 35°F (2°C) Maximum 90°F (32°C)

SHELF LIFE
24 months at recommended storage temperature.

FLASH POINT - SETA
40°F (4°C)

HEALTH & SAFETY
Paint and related products contain chemical ingredients which are considered hazardous. Read container label warning and Material Safety Data Sheet for important health and safety information prior to use of this product. Use only in well-ventilated or open areas. Special precautions should be taken to avoid vapor transmission (fumes) from entering the building being treated. Ventilation systems and fresh air intakes should be turned off and closed. All direct routes of vapor ingress such as windows and doors must be secure. Notify occupants of the building prior to application, as vapors may be irritating. Keep out of the reach of children.
Coverage rates are guidelines and will vary depending upon the texture of the surface and porosity of the substrate.

</table>

A test application must be performed to determine the exact coverage rate, desired performance and compatibility of Dur A Pell 40 and the substrate before beginning a job.

Mix well prior to application.

Do not dilute or thin. Dur A Pell 40 must be used as supplied by the manufacturer.

Apply using a low-pressure rotary or gear pump sprayer with a fan tip (0.03-0.06 orifice) that allows for application of the product at 20-30 psi. A commercial grade pump-up spray tank equipped with a fan tip is also acceptable. Airless paint sprayers are not acceptable for the application of water repellents. Do not atomize the product.

On vertical installations, apply with a wet-on-wet technique. Apply a saturating application of the product working from the bottom up. On porous substrates such as concrete masonry units, allow a slight rundown (less than three inches). On high density materials such as precast concrete panels or GFRC, do not allow any rundown. On all substrates allow the product to penetrate the substrate for approximately 5 to 7 minutes, then apply again in the same manner. This second pass will require less material. Follow coverage rate guidelines, however, a test application should always be performed.

On horizontal installations, apply in a single, saturation application. Apply enough material for the surface to remain wet for 2 to 3 minutes before absorbing into the substrate. Do not allow puddles to remain on surface; any areas of ponding should be dispersed with a broom.

Minimum 45°F (7°C)     Maximum 90°F (32°C)

Note: Dur A Pell 40’s volatility increases with temperature, therefore more material will evaporate from the treated surface prior to curing when temperatures exceed 80°F (27°C).

None required. Reapply after Dur A Pell 40 no longer repels water or offers desired protection. Life expectancy is dependent upon substrate condition and quality of application.

Clean equipment after use with paint thinner or mineral spirits.
