**PRODUCT PROFILE**

**GENERIC DESCRIPTION**
Modified Polyamine Epoxy

**COMMON USAGE**
A versatile, thick film, 100% solids, abrasion-resistant lining specifically designed for domestic and industrial wastewater immersion and fume environments. Series 435 provides low permeation to H₂S gas, protects against MIC and provides chemical resistance to severe wastewater environments. Contains micro-fiber reinforcement for improved film integrity.

5020 Gray, 5023 Beige. **Note:** Epoxies chalk with extended exposure to sunlight.

**COLORS**
Gloss

**FINISH**

**COATING SYSTEM**
Series 215, 217, 218.

**SURFACER/FILLER/PATCHER**

**PRIMERS**
**Steel:** Self-priming or Series L69, L69F, N69, N69F, V69, V69F.

**Concrete:** Self-priming or Series L69, L69F, N69, N69F, V69, V69F. **Note:** Series 435 must be applied to Series L69, L69F, N69, N69F, V69, V69F within 7 days. Scarify the surface with fine abrasive before topcoating if exceeding this maximum recoat window.

**INTERMEDIATE**
Series 434 or 436 (optional)

**OTHER SUBSTRATES**
Contact your Tnemec representative or Tnemec Technical Services.

**ALL SURFACES**
Must be clean, dry and free of oil, grease and other contaminants.

**SURFACE PREPARATION**
Prepare surfaces by method suitable for exposure and service. Refer to the appropriate primer data sheet for specific recommendations.

**STEEL**
SSPC-SP5/NACE 1 White Metal Blast Cleaning with a 3.0 mil minimum angular anchor profile.

**CONCRETE**
Allow new cast-in-place concrete to cure a minimum of 28 days at 75°F (24°C). Verify concrete dryness in accordance with ASTM F 1869 "Standard Test Method for Measuring Moisture Vapor Emission Rate of Concrete Subfloor Using Anhydrous Calcium Chloride" (moisture vapor transmission should not exceed three pounds per 1,000 square feet in a 24 hour period), F 2170 "Standard Test Method for Determining Relative Humidity in Concrete using in situ Probes" (relative humidity should not exceed 80%), or D 4263 "Standard Test Method for Indicating Moisture in Concrete by the Plastic Sheet Method" (no moisture present). Prepare concrete surfaces in accordance with NACE No. 6/SSPC-SP13 Joint Surface Preparation Standards and ICRI Technical Guidelines. Abrasive blast, shot-blast, water jet or mechanically abrade concrete surfaces to remove laitance, curing compounds, hardeners, sealers and other contaminants and to provide a minimum ICRI-CSP 5 surface profile. Large cracks, voids and other surface imperfections should be filled with a recommended filler or surfacer.

**PREPARATION**
Contact your Tnemec representative or Tnemec Technical Services.

**TECHNICAL DATA**

**VOLUME SOLIDS**
100% (mixed)

**RECOMMENDED DFT**

**Steel:** 15.0 to 40.0 mls (380 to 1015 microns) in one or two coats.

**Concrete:** 30.0 to 40.0 mls (760 to 1015 microns) in one or two coats.

**Hi-Build Option:** 40.0 to 125.0 mls (1015 to 3175 microns) in one or two coats.

**Glaze Coat Option (over Series 434 or 436):** 15.0 to 20.0 mls (380 to 510 microns).

**Note:** Number of coats and thickness requirements will vary with substrate, application method and exposure. Contact your Tnemec representative for current technical data and instructions.

**CURING TIME**

<table>
<thead>
<tr>

<td>14 hours</td>
<td>2 days</td>
<td>7 days</td>
</tr>
<tr>
<td>55°F (13°C)</td>
<td>7 hours</td>
<td>30 hours</td>
<td>3 days</td>
<td>7 days</td>
</tr>
</tbody>
</table>

**Note:** If more than 7 days have elapsed between coats, the Series 435 coated surface must be mechanically abraded before topcoating. Curing time will vary with surface temperature, air movement, humidity and film thickness. **Note:** Use “To Touch” cure information for minimum recoat times if succeeding coats are spray-applied and “Dry Through” if succeeding topcoats are applied by roller or brush.

**VOLATILE ORGANIC COMPOUNDS**
EPA Method 24

**Unthinned:** 0.32 lbs/gallon (38 grams/litre)

**HAPS**
0.1 lbs/gal solids

**THEORETICAL COVERAGE**
1,694 mil sq ft/gal (39.4 m²/L at 25 microns). See APPLICATION for coverage rates.

**NUMBER OF COMPONENTS**
Two: Part A (Epoxy) and Part B (Amine)

**MIXING RATIO**
By volume: One (Part A) to one (Part B)

† Plural Component application only.

**NET WEIGHT PER GALLON**
10.85 ± 0.25 lbs (4.92 ± .11 kg) (mixed)

Published technical data and instructions are subject to change without notice. The online catalog at www.tnemec.com should be referenced for the most current technical data and instructions or you may contact your Tnemec representative for current technical data and instructions.
CONTENT

STORAGE TEMPERATURE
Minimum 40°F (4°C)  Maximum 110°F (43°C)
For optimum handling and application characteristics, both material components should be stored or conditioned between 70°F and 80°F (21°C and 27°C) 48 hours prior to use.

TEMPERATURE RESISTANCE
(Dry) Continuous 275°F (135°C)  Intermittent 300°F (149°C)

FLASH POINT - SETA
12 months at recommended storage temperature.

HEALTH & SAFETY
This product contains chemical ingredients which are considered hazardous. Read container label warning and Safety Data Sheet for important health and safety information prior to the use of this product.

APPLICATION

BEFORE COMMENCING: Before commencing, obtain and thoroughly read the Series 435 Surface Preparation and Application Guide.

COVERAGE RATES

<td>40.0 (1015)</td>
</tr>
</tbody>
</table>

Note: Recommended DFT will depend on substrate condition and system design. Refer to Recommended DFT section on page 1. Allow for overspray and surface irregularities. Film thickness is rounded to the nearest 0.5 mil or 5 microns.

MIXING
Mix the entire contents of Part A and Part B separately. Scrape all of the Part A into the Part B using a flexible spatula. Use a variable speed drill with a PS Jiffy blade and mix the blended components for a minimum of two minutes. During the mixing process, scrape the sides and bottom of the container to ensure all of Parts A and B are blended together. Apply the mixed material within pot life limits after agitation. **Note:** A large volume of material will set up quickly if not applied or reduced in volume. **Caution:** Do not reseal mixed material. An explosion hazard may be created.

Mixing ratio is one to one by volume.

THINNING
**DO NOT THIN**

POT LIFE
25 to 50 minutes at 70°F (21°C)  15 to 20 minutes at 80°F (27°C)
Material temperatures above 80°F (27°C) will significantly reduce the spray and pot life.

SPRAY LIFE
20 to 25 minutes at 75°F (24°C)
Flush the pump and lines immediately after spraying.

</tbody>
</table>

Note: Material needs to be gravity fed through a material hopper. Material will not feed through a suction tube.

**Roller:** Use high quality 3/8" to 1/2" synthetic woven nap roller covers.

**Brush:** Recommended for small areas only. Use high quality synthetic or nylon bristle brushes.

**Plural Component:** Please contact your Tnemec representative or Tnemec Technical Service for information.

SURFACE TEMPERATURE
Minimum of 50°F (10°C), optimum 65°F to 80°F (18°C to 27°C), maximum of 130°F (54°C). The substrate temperature should be at least 5°F (3°C) above the dew point.

MATERIAL TEMPERATURE
For optimum handling and application characteristics, both material components should be stored or conditioned between 70°F and 80°F (21°C and 27°C) 48 hours prior to use. Temperature will affect the workability. Cool temperatures increase viscosity and decrease workability. Warm temperatures will decrease viscosity and shorten the spray and pot life.

HOLIDAY TESTING
If required by project specifications, High Voltage Discontinuity (spark) testing shall be performed using a Tinker & Rasor AP/W High Voltage Holiday Tester. Contact Tnemec Technical Service for voltage recommendations.

CLEANUP
Flush and clean all equipment immediately after use with Tnemec’s No. 4 Thinner or MEK.

WARRANTY & LIMITATION OF SELLER’S LIABILITY: Tnemec Company, Inc. warrants only that its coatings represented herein meet the formulation standards of Tnemec Company, Inc. THE WARRANTY DESCRIBED IN THE ABOVE PARAGRAPHS SHALL BE IN LIEU OF ANY OTHER WARRANTY, EXPRESSED OR IMPLIED, INCLUDING BUT NOT LIMITED TO, ANY IMPLIED WARRANTY OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE. THERE ARE NO WARRANTIES THAT EXTEND BEYOND THE DESCRIPTION ON THE FACE HEREOF. The Warranty described in the above paragraph shall be in lieu of any other warranty, expressed or implied, including but not limited to, any implied warranties of merchantability or fitness for a particular purpose. There are no warranties that extend beyond the description on the face hereof.

The buyer’s sole and exclusive remedy against Tnemec Company, Inc. shall be for replacement of the product in the event a defective condition of the product should be found to exist and the exclusive remedy shall not have failed its essential purpose as long as Tnemec is willing to provide comparable replacement product to the buyer. **No Other Remedy (including, but not limited to, Incidental or Consequential Damages for Lost Profits, Lost Sales, Injury to Person or Property, Environmental Injuries or Any Other Incidental or Consequential Loss) Shall be Available to the Buyer.** Technical and application information herein is provided for the purpose of establishing a general profile of the coating and proper coating application procedures. Test performance results were obtained in a controlled environment and Tnemec Company makes no claim that these tests or any other tests, accurately represent all environments. As application, environmental and design factors can vary significantly, due care should be exercised in the selection and use of the coating.
